SEBRING — The Highlands County Solar Co-op has selected Coronado Solar to install solar panels for the 30-member group.

Co-op participants selected Coronado Solar through a competitive bidding process over two other firms. The group will hold its final public information session at 6 p.m. today to educate the community about solar and the co-op process.

“Coronado Solar is incredibly excited to be selected as the installers for the Highlands County Solar Co-Op,” Drake Stalter, with Coronado Solar, said. “We feel even more grateful that [the selection committee] has chosen a local company to serve the people here in Highlands County.

“Coronado Solar is going into its 11th year as a solar contractor in Florida, locally owned and operated here in Avon Park,” Stalter said. “We are excited about the co-op and the opportunity to serve the community in our back yard.”

The co-op is open to new participants until July 16. Highlands County residents interested in joining the co-op can sign up online at solarunitedneighbors.org/highlands.

Solar United Neighbors expands access to solar by educating Highlands County residents about the benefits of distributed solar energy, helping them organize group solar installations, and strengthening Florida solar policies and its community of solar supporters.

The solar co-op is free to join. Joining the co-op is not a commitment to purchase panels. Coronado Solar will provide each co-op member with an individualized proposal based on the group rate. By going solar as a group and choosing a single installer, participants can save on the cost of going solar and have the support of fellow group participants and solar experts at Solar United Neighbors.

The final public information session at 6 p.m. today is at RCMA, 100 Ernest E Sims St., in Avon Park.
