

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

Please Note: This is a new submission process using Responsive software. Please go to the link below to create an account on Responsive. All questions must be completed to submit a response. Please **SAVE** your work throughout the submission process.

Submit a response to our Central Indiana 2026 Solar Co-op RFP here:
solarunitedneighbors.org/INcentralRFP

For general guidance on the platform, please refer to our [step-by-step guide](#). If you have any additional questions, please contact us at inteam@solarunitedneighbors.org – we would be happy to schedule a meeting during the week of 7/13/26.

–

7/6/26

Dear Installer,

Thank you for your interest in our Central Indiana 2026 Solar Co-op! We're excited to issue a Request For Proposal (RFP) on behalf of a group of 25+ homeowners in Central Indiana. The group will continue to grow throughout the summer and we anticipate a total number of participating households in excess of 75 members. We've worked closely with community stakeholders and volunteers to recruit interested homeowners for this group.

We are issuing this RFP with the intent of selecting one company ("Proposer") to provide solar photovoltaic (PV) energy systems, level 2 EV chargers, and optional battery backup or retrofits for the participating homeowners and businesses. The Proposer will provide a single price/kW installed for the group and an installed price for level 2 EV chargers. If the Proposer offers battery backup or battery retrofits, the Proposer will provide price ranges for installation, equipment, and design offered to homeowners and businesses participating in the group.

The goal of the solar co-op is two-fold: (1) to enable the co-op members to receive competitive pricing on their solar, EV charger, and battery systems by proceeding as a group, and (2) to provide the project developer with an extensively pre-screened and well-educated group of customers.

This solar co-op includes grant funding to fully support at least ten (10) solar installations for income qualified households. The grant funded solar systems should be sized around 4 kW and meet the additional specifications included in the RFP below. Additionally, required supplemental questions referring to these income qualified installations are included in the RFP questionnaire section of the Responsive platform.

Central Indiana 2026 Solar Co-op Timeline

1. RFP Issue Date: 7/6/26
2. **Proposals Due: 7/16/26 by 5:00 p.m.**
3. Selection Committee Review: Week of 8/3/26 (tentative)
4. Notice of Intent to Award: 8/7/26
5. Installer Award Agreement Completed: 8/14/26

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

6. Deadline (tentative) for new co-op members to sign up: 9/30/26
7. Deadline (tentative) for all site visits completed: 10/30/26
8. Deadline (tentative) for all proposals to co-op members: 11/16/26
9. Deadline (tentative) for all signed contracts: 12/4/26

We are working to help as many homeowners go solar as possible. We also want to help grow a strong, vibrant solar market in the region. We've been organizing solar cooperatives since 2007, facilitating 495+ different solar co-ops with thousands of co-op members, resulting in over 112 MW of contracted residential solar.

—

If you would like to submit a response to this RFP, please go to the link below to create an account with Responsive. If you already have an account with Responsive, use that to access the RFP response portal. Proposals are due by submission through Responsive by 5:00 p.m. on 7/16/26 (Late submissions will not be accepted)

Submit a response to our Southwest Indiana 2026 Solar Co-op RFP here:
solarunitedneighbors.org/INcentralRFP

NOTE: If you plan to respond to more than one SUN RFP announcement, this software will let you save and re-use your responses for easier preparation and submission next time!

—

Below you will find additional information and requirements for compiling a compelling proposal. If you have any questions about the process or expectations, please don't hesitate to email. Please see the document on the last page for guidance on commercial, non-profit, and large systems as part of the co-op.

We look forward to receiving your submissions!

Best,

Zach Schalk
INteam@SolarUnitedNeighbors.org
Indiana Program Director

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

**Please respond to this RFP by using our web-based Responsive portal. Link included above.
The following are bid requirements and useful suggestions.**

Scope of work

Services to be provided by Solar United Neighbors

1. Pre-screen co-op members by reviewing each roof via publicly available satellite imagery. Assessments performed by Solar United Neighbors are categorized by “Qualified”, “Maybe Qualified”, and “Disqualified” (based on shading, size, shape, orientation) and are not intended to be overly restrictive. Our goal is to find the balance between wasting a homeowner’s or the developer’s time and unnecessarily excluding co-op members.
2. Recruit co-op members after selection (see timeline above). We expect the numbers of co-op members to increase significantly by the end of the project cycle.
3. We’ll issue promotional materials (press release and social media posts, etc.) as well as work to generate local media attention. We’ll clear materials with you to the best of our ability. We will feature your company prominently while keeping bid details confidential.
4. Support co-op members and the selected developer throughout the process.
5. Host celebration of successful co-op and public recognition of the work of the installer.
6. Distribute information should any details about the RFP be clarified or changed during the RFP period.

Services to be provided by the Proposer

1. A custom proposal for each co-op member in the group based on the group pricing and component offerings outlined in bid. The proposal should include language that explains all the services provided in the turnkey price for the system (assessment, system design, permitting, installation, interconnection paperwork, etc.). Please provide us the first three (3) proposals you send to co-op members.
2. In person (or virtual conference) site assessment, structural assessment, design, equipment procurement, installation, monitoring setup, financing, customer training (i.e. safety rules, monitoring, maintenance, how to deal with problems, etc.), permitting, and application/management of applicable incentives.
3. \$600 per signed contract to be paid to Solar United Neighbors as a development fee. This includes solar, solar + EV charger, solar + storage, and battery retrofit contracts. Contracts for EV chargers only (without solar) will be at \$75/signed contract. This fee should be incorporated into the \$/W price, not listed as an adder. We accept payment by check or ACH (electronic bank transfer).
4. Responsive communication with group members
5. Responsive communication and coordination with Solar United Neighbors about group and individual co-op member status
6. Participate in public education/outreach events.
7. Installations performed in conformance with all applicable laws and codes, interconnection requirements for net-metered installations and any incentive-related installation requirements, rules, and timelines. Solar United Neighbors defers to the [SEIA Solar Business Code](#) as a determinant of fair, transparent business practices to ensure solar customers are treated in a fair and honest manner. In addition to the SEIA Code, Companies shall abide by the law and all applicable ethical business guidelines set forth by the Council of Better Business Bureaus (BBB),

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

Federal Trade Commission (FTC), Consumer Financial Protection Bureau (CFPB), relevant state consumer protection bureaus, and other regulatory bodies with jurisdiction.

8. For installers that provide brokerage services for SRECs, installer may not obligate co-op member to sell SRECs to said installer. As long as co-op member retains ownership of the solar system, co-op member should be able to select his/her preferred broker, which may include installer. If co-op member opts for a PPA or leased system, installer may manage SRECs freely.

IQ Program Requirements

The selected installer will be required to provide pricing for an Operations & Maintenance plan for each IQ installation, which includes:

- 10 years of coverage (including a minimum 10-year workmanship warranty)
- At least one module cleaning (in the 10-year time period) At least one system check-up (in the 10-year time period)
- Proactive system monitoring and response- Labor on warranty work that is not covered by manufacturer warranty

The selected installer will be required to provide the following documentation to Solar United Neighbors for each income qualified installation:

- A copy of your signed contract with the homeowner.
- A copy of the approved inspection certificate from the AHJ
- A copy of executed Authorization to Operate from the Utility
- Itemized invoices for each installation to Solar United Neighbors for payment broken down by material, labor, and administrative costs at specified milestone.

The selected installer will also be required to facilitate the signature by the homeowner of some or all of the following documentation that will be provided by Solar United Neighbors

- Signed Solar United Neighbors program participant agreement
- Signed homeowner covenant
- Signed SREC contract documents

Individual project milestone payments for income qualified participants will be set by Solar United Neighbors. Those milestone payments are at:

- Contract sign by the homeowner
- Completion of inspection
- Authorization to Operate from the utility

Invoices will be sent to Solar United Neighbors at the end of each month for the above payment milestones.

The installer will be responsible for paying the designated referral fee to Solar United Neighbors, which will be the same amount for market-rate and income qualified installations.

NOTE: For market-rate co-op participants, the milestone payments proposed by the installer in their proposal will be used per the usual co-op process.

The selected installer must maintain the following insurance levels:

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

- Commercial General Liability Insurance: \$1,000,000 limit per occurrence and \$2,000,000 aggregate;
- Automobile Liability Insurance: \$1,000,000 per occurrence.
- Workers Compensation Insurance: \$100,000 per accident for injury;
- \$500,000 per employee for disease; and \$500,000 policy limit for disease;
- Umbrella/Excess Liability Insurance: \$2,000,000 limit per occurrence.

The selected installer is also required to provide additional documentation above the normal Solar United Neighbors co-op requirements. Please pay close attention to the bottom of the response template for a list of those documents.

Bid Requirements

- **Offer a single purchase price (\$/watt) for all co-op members.**
 - This price will be offered to all homeowners (and businesses) participating in the solar co-op.
 - You may not exclude from your proposals any of the co-op members involved in this RFP.
 - You do not need to provide individualized proposals for each homeowner in this initial bid. If selected to develop the group of projects Proposer will provide individualized proposals for each co-op member.
- **Explicitly state any additional charges not included in the \$/watt price in the proposal** (e.g., charges for electrical upgrades, steep roofs, specific roofing types/materials, roof attachment methods/components, multiple array locations, small system size, customized racking, tree trimming, etc.)
 - The assumption is that all costs to most co-op members are factored into the base price, and that an additional charge, if necessary, is reserved for unique circumstances.
- **Consider all selection criteria when preparing your proposal.** Although the Selection Committee will look for aggressive pricing, price is **not** the only factor they will consider. Participants also value experience in the marketplace, quality system components, and strong warranties, among other factors. Solar co-ops should not be a “race to the bottom” in terms of system price and quality, nor do we want proposers to feel they must sacrifice quality in order to be selected.
- **Bid with PV modules that:**
 - Are listed and reviewed on the California Energy Commission list, '[Incentive Eligible Photovoltaic Modules in Compliance with SB1 Guidelines](#)' or installer must provide similar performance information for selection committee from an alternate source, or by referencing a CEC-listed panel from the same product family.
 - Have at least a 25-year power warranty with a specified performance degradation curve showing acceptable levels of performance or replacement and show achievement of a minimum of 80% of the nameplate rated power at STC by year 25;
 - Have a product warranty of at least 10 years.
- **Bid with inverters that:**
 - Are included in the California Energy Commission list '[List of Eligible Inverters per SB1 Guidelines](#)' or installer to provide similar performance information for selection

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

- committee from an alternate source or by referencing a CEC-listed inverter from the same product family.
- Have a warranty that allows for replacement due to premature failure over the specified warranty time frame and be a minimum of 15 years for micro inverters and 10 years for string inverters.
- **Utilize mounting equipment that is:**
 - Grounded in accordance with manufacturer's specifications.
 - Used in accordance with its manufacturer's listed purpose and specifications.
 - Used in accordance with manufacturer specifications for waterproofing penetrations
 - Meets any specific local zoning requirements beyond #2 and #3
- **Level 2 EV chargers must:** Be UL or ETL certified.
- **Meet the following licensing requirements**
 - Proposer submitting the bid is licensed to operate within Indiana
 - Proposer must provide evidence of necessary licensing required for completing the proposed work in the designated co-op area, or a plan to obtain the necessary licensing required if needed
 - Proposer submitting the bid must be a staff member of the solar company who would receive the work
 - NOTE: Bids from third party sales representatives will not be accepted
- **Meet the following insurance requirements (for proposer and any sub-contractors):**¹
 - General liability - \$1,000,000 per occurrence, \$2,000,000 in aggregate
 - Worker's compensation - \$1,000,000 each accident, each employee, policy limit
 - Automobile liability - bodily injury, death, and property damage combined single limits of at least \$1,000,000 per occurrence covering vehicles owned, hired, or non-owned
 - NOTE: Official proof of exemption by applicable jurisdiction for any above insurance requirements for a company is also acceptable.

Have you worked on a Solar United Neighbors co-op before?

In order to be eligible to submit a proposal for this co-op, you must:

1. Have no overdue invoices for past solar co-op work.
2. Have updated all customer tracking data for active or completed co-ops (including kW installed and interconnection completed dates).
3. Have completed initial contacts, site visits, and individualized proposals for the majority of any existing co-op you are currently working on.

¹ These requirements are in line with the Solar Energy Industry Association's described best practices <https://www.seia.org/research-resources/installation-best-practices-residential-portfolios>

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

Solar United Neighbors reserves the right to deny any proposer's bid due to overdue payments, lack of proper licensure for applicable jurisdictions, or outstanding co-op member grievance yet to be resolved.

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

Useful Info

How a solar co-op works

A solar co-op is when a group of homeowners goes through the solarization process together.

More detailed information about each phase is available here:

<http://www.solarunitedneighbors.org/for-installers/>

How a co-op selects an installer

After all interested installers have submitted a proposal in response to this Request for Proposals, Solar United Neighbors will convene a selection committee of co-op members. This Selection Committee, consisting of homeowners participating in the solar co-op, will review the proposals. Each Selection Committee member signs a confidentiality agreement to keep your bid details private. The Committee will select **one Proposer** to develop all of the projects for the group.

The process used to select the winning bid will be as follows:

1. Once Selection Committee members sign the confidentiality agreement, bids will be distributed to Selection Committee members along with a summary spreadsheet created by our staff.
2. Selection Committee members may review bids independently before meeting as a group.
3. Committee members will convene in one evening to review all bids and make a decision. During that meeting they will:
 - a. Discuss each bid

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

- b. Select finalists
- c. Contact the designated bid representative for each finalist if a bid component needs clarification. (Committee may decide not to contact finalists if no clarification is needed.)
- d. Select a winning company to service the co-op.

If you are selected as a finalist and the committee calls you that evening, you will have an opportunity to speak about your bid and to answer questions. Please abide by the following:

1. No discussions of other installers' bids, reputation, etc. This is about your proposal only.
2. Please do not negotiate to change any aspect of the bid from what is in your proposal. Clarifications of what's included are acceptable.
3. Keep responses as brief as possible.

Selection Criteria

**Please note: The "importance" column below reflects the selection criteria priorities and preferences of the co-op members and will often vary from one co-op to another*

<u>Category</u>	<u>Description</u>	<u>Importance</u>
<u>Offer the best price</u>	The extent to which proposed pricing terms are competitive.	80% of members interested
<u>Use higher quality equipment</u>	The extent to which the Proposer incorporates high-quality components (high CEC panel ratings, flashed/non-penetrating attachments, etc.) and American-made products into their system design.	60% of members interested
<u>Have more experience</u>	The extent to which the Proposer demonstrates a track record of quality work and incorporates photovoltaic technologies in line with industry standards. Experience in the Indiana market a plus.	45% of members interested
<u>Offer stronger warranties</u>	The extent to which the Proposer offers strong warranties on system components and labor.	60% of members interested
<u>Are a local company/ woman or minority-owned business</u>	The extent to which the proposed solar PV systems foster social and community development, including hiring Central Indiana area workers and offering local job training	45% of members interested

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

	opportunities. Preference will be given to locally-owned companies. Active membership in SEIA, our partner on policy issues, is also a plus.	
Please take note of these non-solar offering questions:		
<u>Battery Storage</u>	Number of members interested or potentially interested in battery storage.	6 members indicated interest. 10 members indicated potential interest.
<u>Level 2 Electric Vehicle Chargers</u>	Number of members interested in installing a level 2 EV charger.	1 member indicated interest. 5 members indicated potential interest.
<u>Financing</u>	Number of members considering financing.	3 members indicated interest. 8 members indicated potential interest.

If you would like a summary of roof types in this co-op, please contact us.

Lessons learned from previous solar co-ops

Historically, we have seen participant close rates of between 20% and 30%. Our goal with each solar co-op is to have a 30% (or higher) close rate for participants. We've put a lot of time into recruiting and educating the participants and we want to make sure that as many qualified participants as possible move forward with projects.

Our aim is not to interfere with your internal process or micromanage how you do business. We have, however, seen very different close rates within solar co-ops. Some of this has to do with the installer's process and approach. Below we've put together some lessons learned that we've found are helpful in getting a high close rate.

Installers with higher close rates:

- Called participants to schedule an initial site visit and followed up via email instead of only emailing.
- Reach out to selection committee members early—they are often the first signed contracts.
- Use the co-op as a "special offer" to lost leads in the co-op area, directing them to our sign-up page so they have support and education that can help to convert to a signed contract.
- Scheduled site visits as soon as possible and provided quick turn-around times for sending proposals to participants (proposals received 1 week or less after site visit).
- Provided participants with a proposal and a final contract for signature at the same time (so the customer has all information to finalize their decision).
- Had short, concise, and clear email communications with participants. When there's lots of text in a proposal or email, participants stop reading.
- Let the group know when they would be unavailable or were experiencing delays. Participants understand delays; they just want to be kept in the loop about when to expect information from installers. We can communicate this to the group as a whole and help manage expectations too. Just let us know how things are going.

Central Indiana 2026 Solar, EV Charger, and Battery Storage Co-op RFP

- Maintained organized, updated customer tracking records. We use these records to monitor group progress and respond to participant questions and concerns.
- Communicated with us about difficulties reaching participants. We'll remain involved throughout the process and are happy to reach out to participants to reassure them, encourage scheduling site visits, signing contracts, etc. Just let us know what you need.

Q&A Process

Solar United Neighbors will act as the point of contact for all solar co-op and RFP related questions on behalf of the co-op members covered under this RFP. Zach Schalk will manage all communications. Please submit any questions and/or comments via email to inteam@solarunitedneighbors.org. Proposers that contact co-op members directly for any reason will be disqualified.

What we will disclose to group members about your bid if you are selected

We will disclose this information to the entire group (not the public) about your winning bid:

- Equipment included in the bid
- Warranties on all equipment and installation
- Base pricing and key adders
- System cost examples based on your bid pricing, average sizes and equipment options (noting that bid pricing and component offering is for limited co-op time frame and may not be applicable to non-co-op members)
- Installer contact information and next steps for each homeowner
 - NOTE: If you are selected, we will work with you to clarify this.

Commercial, non-profit and large systems

Solar Co-ops are mostly made up of residential customers but may include some small businesses, non-profit organizations, churches and other larger than residential systems.

At Solar United Neighbors, we realize that commercial projects may be priced differently and are often custom or cannot be completed within the timeframe of the solar co-op. Due to the complexity of the projects, this can result in a higher price per watt due to permitting or sometimes a lower price per watt for larger installations.

If a lower price per watt is available for the customer than the co-op pricing, feel free to include this price in the customer's proposal. The solar co-op is not meant to get in the way of you making a sale.

If higher pricing is required due to the complexity of the project, including but not limited to engineering upcharges or meter issues, we expect that you honor the spirit of discounted pricing you are providing for residential customers for any commercial customers in the group.
